## SUMMARY

AI and Data Science engineering student with hands-on experience building full-stack web applications and Generative AI solutions. Skilled in React, TypeScript, Node.js, Express.js, MongoDB, REST APIs, Retrieval-Augmented Generation (RAG), LLM integration, semantic search, vector databases, and automated testing. Experienced in developing responsive user interfaces, backend services, authentication workflows, and AI-powered developer tools.

## TECHNICAL SKILLS

**Languages:** JavaScript, Python, C++
**Frontend:** React.js, HTML5, CSS3, Tailwind CSS, Vite
**Backend:** Node.js, Express.js, REST APIs, WebSockets, JWT, Role-Based Access Control (RBAC)
**Databases:** MongoDB, MongoDB Atlas Vector Search, SQL
**Generative AI:** RAG, Large Language Models (LLMs), Text Embeddings, Semantic Search, Conversational Memory
**Tools & Testing:** Git, GitHub, Postman, Docker, Vitest, Supertest, Clerk, Stream Video SDK, Monaco Editor
**CS Fundamentals:** Data Structures and Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Networking

## EDUCATION

**B.Tech in Artificial Intelligence and Data Science** — **2023 – 2027**
*CSMSS Chh. Shahu College of Engineering* — *CGPA: 7.61*

**Higher Secondary Certificate (HSC)** — **2023**
*Maharashtra State Board* — *CGPA: 7.79*

## EXPERIENCE

**Freelance Full-Stack Developer** — **Feb 2026 – May 2026**
*The OneKraft* — *Remote*

- Enhanced a responsive business website, implementing reusable UI components using Next.js and Tailwind CSS, ensuring consistent layouts across desktop and mobile devices.
- Collaborated with the client to gather requirements, deliver features, debug issues, and refine functionality based on feedback.
- Used Git, GitHub, and Postman for version control, API testing, and debugging.

## PROJECTS

**AI Codebase Assistant** — *React, TypeScript, Node.js, Express, MongoDB Atlas Vector Search*

- Architected a Retrieval-Augmented Generation (RAG) application that indexes public GitHub repositories and answers natural-language codebase questions with file and line-number citations.
- Built an ingestion pipeline using the GitHub REST API, syntax-aware chunking with a 60-line sliding-window fallback, and content-hash deduplication to avoid redundant indexing.
- Implemented semantic retrieval using MongoDB Atlas Vector Search, 768-dimensional Gemini text-embedding-004 embeddings, cosine similarity, and Gemini 2.0 Flash for context-grounded responses.
- Built a React and Tailwind CSS interface with a code inspector, syntax highlighting, and repository summaries; improved reliability with Express rate limiting and quota-fallback handling.

**Interview System** — *MERN, MongoDB Atlas, Clerk, Stream Video SDK, WebSockets*

- Built a full-stack technical interview platform with session management, sync workflows, coding tasks, and evaluation data.
- Implemented Clerk authentication and role-based access control, a collaborative Monaco code editor with WebSocket synchronization, and real-time video communication using Stream Video SDK.
- Integrated backend code execution and MongoDB Atlas persistence for interview sessions, candidate details, submitted solutions, and evaluation results.
- Implemented AI-powered interview monitoring to flag potential violations and generate interview transcripts and summaries for candidate feedback.

**PeoplePost** — *React.js, Node.js, Express.js, MongoDB, JWT, Cloudinary*

- Developed a MERN social media application to raise and resolve civic issues with user registration, authentication, post creation, editing, and image sharing.
- Built JWT-protected REST APIs and integrated Cloudinary for image uploads and storage.
- Built features like automatic geo location tagging, voice msg input and request tracking.

## CERTIFICATIONS

- Oracle Agentic AI Foundations Learning Path
- Cisco Introduction to Cybersecurity
- freeCodeCamp Responsive Web Design
- 1st Runner-Up, Inter-College Coding Competition
